

eValidation Web Validation System

With TIBA's **eValidation** any regular computer with an internet connection can become a validation unit. eValidation works simply and easily by logging into a secure website and entering the ticket number for the validation to apply to the transaction in real time. Various validation types can be applied such as flat rate, discounted rate, hours discount and more. All PARCS system components recognize the validation in real-time, calculate the new parking fee and update the balance accordingly. A barcode scanner is available for high volume validation accounts.

The user interface is very simple. After logging in, the user enters the patron's ticket number and authorizes the transaction. The exit transaction can be viewed by the user after the patron exits the facility. An ongoing summary of daily transactions will display in the user interface screen. The user can select different validation types, companies and accounts based on the permissions granted by the administrator of SmartPark. All functions of eValidation can be monitored and controlled from SmartPark by a systems administrator.

The facility management software provides detailed audit reports of the eValidation usage. Future billing of merchants is quick and easy and summarized reports show exactly how much to bill the merchant. In addition, reports can be exported into several formats such as: PDF, RTF, MS Excel, etc.

Features*

- Supports multiple validations on a single ticket
- Assign any active validation type from a selection of preconfigured flat rates, discounted rates, hours discounts and more
- Desktop barcode scanner
- Assign a special agreement rate for future merchant billing as a pre-defined rate or a special merchant pricelist
- Supported on mobile devices and tablets

* Not all features are available or standard in all regions. Check with your local sales person for availability.

Authorization session opened

Main validations screen displays batch, quantities, users and dates
